

# 10

## WAYS TECHNOLOGY IS CHANGING HOW WE TRAVEL IN 2018 AND BEYOND

1

### Smart phones

Smart phones make it easier and faster to connect with people around the world and search the web, all at the touch of a button.

2

### Ridesharing

Services like Uber and Lyft have made it possible to find a ride to and from almost any destination at reasonable rates.

3

### GPS

We can now accurately and quickly navigate from one destination to another anywhere, sharing our ETA and instantly finding the fastest route to take.

4

### Comparison Sites

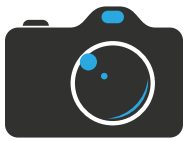

Many websites make it easy to find and compare inexpensive domestic and international flights.

5

### Photos

Most electronics have built-in cameras to make it more convenient to capture the perfect image at the right moment and instantly share memories from traveling.

6

### Overcoming Language Barriers

When traveling to a country with an unfamiliar language, all it takes is a quick translation on your smartphone to communicate with those around you and even learn a language.

7

### Electronic Payments

Paying for goods and services while traveling has become safer and effortless with electronic payments through apps - why carry when you can charge it worry-free?

8

### Booking Excursions

Planning what to do when you're traveling is simple when you can Google the best excursions in the area, watch videos on YouTube, and read reviews on Yelp!

9

### Packing Efficiency

You no longer have to pack your laptop, iPod, digital camera and plane tickets! Most smartphones have everything on them, and digital plane tickets are becoming the norm.

10

### Better Networking

Social media and other advancing technology makes it possible to connect with anyone around the world - whether it's for work or just of personal interest.
